

# The Complete Electronic Prepay Solution

*SimDex PrePay is a product that facilitates the electronic refill of prepaid mobile phone airtime through various terminals.*

## **SimDex PrePay complete solution**

*SimDex PrePay is a complete end-to-end solution ranging from retailers point-of-sale through to network operator or other service providers.*

## **PrePay Host**

*The PrePay host provides an online or offline interface to multiple mobile operators. On-line topup request from dial-in terminals and other sales devices are forwarded to selected mobile operators and airtime is activated via the GSM network. Off-line topup request from dial-in terminals to the host and delivers the PIN activation code back to the terminal.*

## **POS PrePay Solution**

*The PrePay terminal application is a menu driven user-friendly application that allows retailers pull special menu in the terminal for airtime topup, select currency and value for topup.*

## **Wireless PrePay Solution**

*The PrePay solution supports wireless prepay. Prepay mobile users can refill the phone anytime anywhere by using the mobile phone.*

## **Kiosk and ATM PrePay solution**

*The SimDex Prepay System supports connection to Kiosks and ATM's.*

## **EPOS PrePay Solution**

*The PrePay host allows merchant to sell electronically airtime via cash register system.*

## **Internet Prepay Solution**

*The PrePay solution supports also web based sale of airtime both On-line or Off-line.*

## **Management Tools**

*As a part of the overall PrePay system retailers and mobile operators are provided access to the host via web-based user-interface. Through the user-interface, retailers or mobile operators can generate sales reports by terminals or retailer groups, generate detailed transactions list, look at PIN code balance or generate reconciliation.*
